3F Hal

3F Hal is the new product in the 3FA line, designed in collaboration with architect Alessandro Scandurra.

This luminaire represents the perfect synthesis of minimalist and elegant design, offering an innovative solution for lighting workspaces.

Thanks to its compact form and versatility, 3F Hal can be installed in numerous contexts, always guaranteeing correct lighting.

/SCREENS and finishes

Hal series: perfect **PERFORMANCE.**

3F Hal is an innovative product created with the aim of offering maximum versatility. The product is available in 3 different widths: 75, 150 and 300 mm, each characterised by an aesthetic frieze along the entire length of the body, which naturally lightens and slims the luminaire.

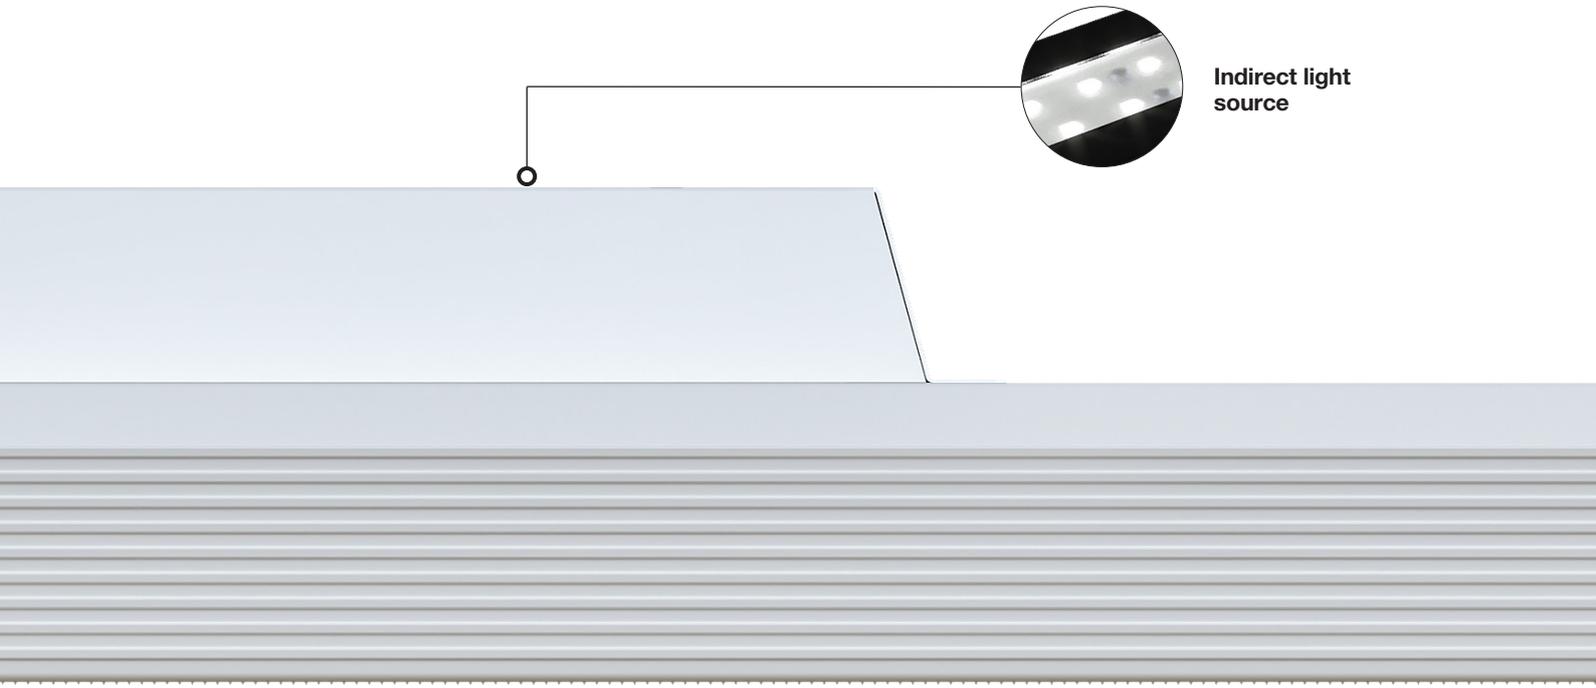

Its micro-prismatic LGS screen ensures luminous uniformity and luminance control $<3000 \text{ cd/m}^2$, thus guaranteeing perfect lighting in every situation.

The product's technology is fully remotely housed in a specially designed housing painted in the same colour as the body.

The product is available in two colours: White and Black.

A luminous **ODYSSEY.**

3F Hal's incredible versatility makes it the perfect choice for multifunctional spaces, both in terms of practicality and efficiency.

The product also incorporates DALI, so that the 3 different emissions (Direct, Indirect and Spot) can be controlled individually and independently.

The **GUIDING** light.

3F Hal is unique in that its main feature is a spotlight with its own switch.

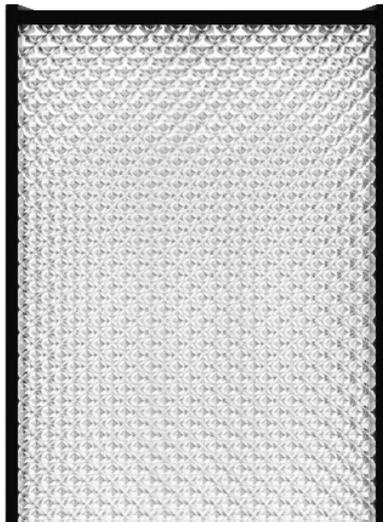

It is built into the shade and is invisible when the product is switched off.

If you choose to switch on the spot only, you will get the lighting effect of a courtesy light; otherwise, if you choose to switch on the screen without the spot, you will see a shadowed area on the screen.

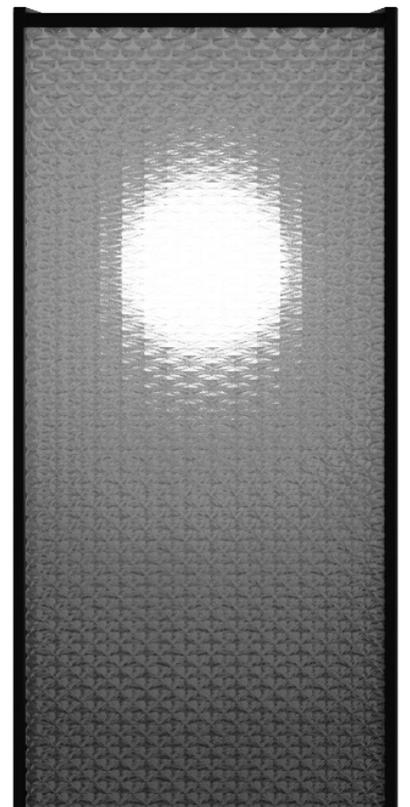

If you switch on the screen + spot, you will still see the spotlight.

N.B.: the spotlight is only available in the 3F Hal Spotlight version.

PROTAGONIST of the environment.

The uniqueness of the 3F Hal is represented by an internal spot, located between the light source and the LGS louvre, which can be used as a courtesy or accent light, creating unique, multi-purpose lighting scenarios. Up to 6 lighting combinations can be created with a single luminaire.

Thanks to this important feature, 3F Hal, like its cinematic counterpart, is able to “direct” the everyday life of each individual, taking care of the smallest details and making it more pleasant and comfortable according to their needs.

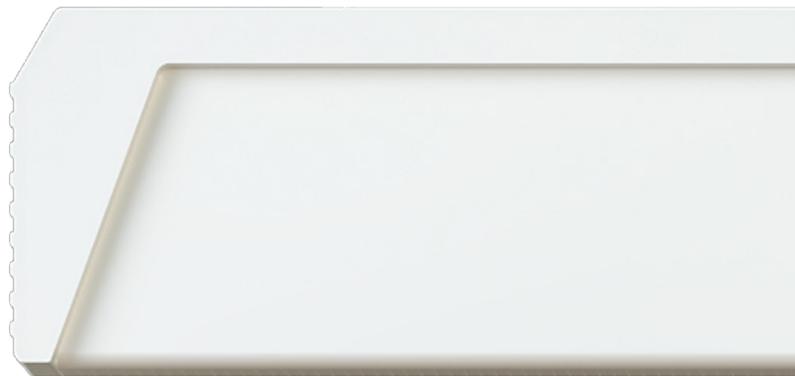

Many **SIZES** and **LENGTHS.**

3F Hal is available in 3 widths, all with the same possible product lengths (600, 1200, 1500 and 1800 mm).

For size 75, the projector is positioned only in the centre of the screen, the body is placed above the product body, which is suspended by two single cables.

For size 150, the projector is positioned laterally next to one of the heads of the product and the electrical compartment is placed above the body, which is suspended by means of a double Y-suspension or by means of two parallel cables for both heads.

In the case of size 300, the projector is positioned laterally, as in the 150 version, with the electrical compartment above the body, which is suspended by means of a double Y suspension or by means of double parallel cables for both heads.

One product, **MULTIPLE** solutions.

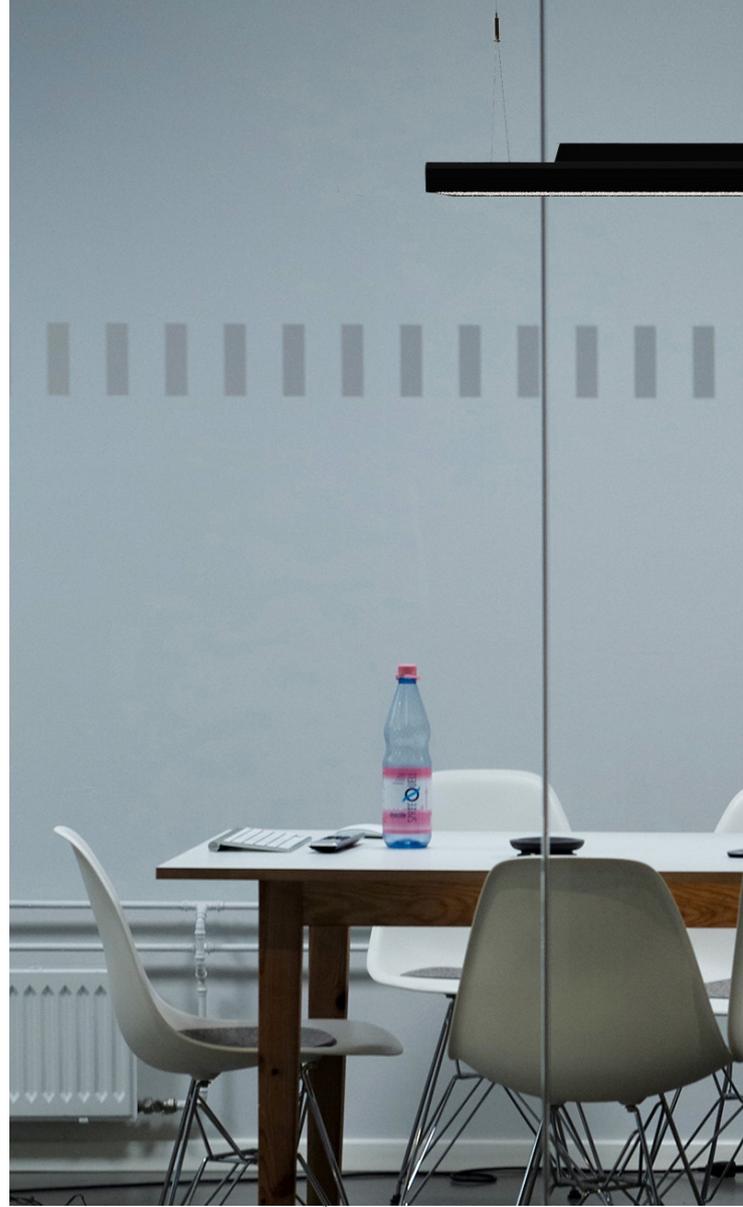

3F Hal is a product designed to meet high standards in every aspect.

Unique aesthetics, technical features at the highest level and the ability to be installed in a variety of ways are all advantages that make

3F Hal a state-of-the-art product. As a 3F Architectural product, 3F Hal accompanies everyday life with advanced, high-performance solutions designed to improve the comfort of those who live and work in spaces.

/product advantages

A **CHANNEL** of light.

Each version of the 3F Hal is also suitable for duct installation. This solution is made possible by customised brackets that allow the product to be aligned and maintained head-to-head, each with its own power supply.

Duct installation is possible for all 4 product lengths: 600, 1200, 1500 and 1800 mm.
